

 **MOBILCOM**  
SAFETY RADIO NETWORKS

**Since 1988 Mobilcom S.r.l** designs, delivers and manages communication systems and solutions for radio, telemetry, data transmission, and remote controls.

The company operates internationally overseeing all the stages of design, supplying complete solutions, from design to installation, to maintenance of the system and its apparatus. Consolidated business dealings and high tech expertise, have made Mobilcom a reference point in the field of telecommunications in the private, public and military sector.

As a result of Mobilcom's many years of experience in Oil & Gas, Automotive, Chemical, Safety and tertiary, the company is now the privileged contact in the processes of evaluation and design of new plants, as well as their constant and meticulous maintenance.

**Mobilcom** offers reliable solutions, designed, controlled and tested by internal staff, so as to guarantee its customers total peace of mind of the work installed.

## markets

*Mobilcom operates in various industrial fields both in Italy and abroad, supplying the major players of the industrial and energy sector. For over twenty years it has been involved in the set up and maintenance of Italy's most important radio networks in the petroleum, energy, automotive and industrial sectors.*

*A long experience in the field has allowed the company to adopt transversal and innovative solutions.*

*Always aware of the challenges of the future Mobilcom is always active in research, training and adoption of innovative technologies.*

## Mobilcom is

- Analog and digital trunked radio networks PMR, DMR, TETRA
- Analog & digital Isofrequency networks
- Radio link, Hiperlan & licensed
- Systems and solutions for hazardous environments Ex

- Paging and personal protection systems
- Special apparatus for industrial plants
- Radio systems point-to-point and point-to-multipoint
- Radio beacons
- Telemetry and Telecontrol

- Aeronautical band systems
- Radio systems for hotels and resorts
- Sound systems for the management of emergencies
- Local relay stations for cell phones
- Video analytics & TVCC advanced systems

## applications

A superior communication technology, able to offer quality, reliability, discretion and functionality.

Improvements in workforce productivity and operational efficiency require a **superior communication technology**. The new radio systems based on digital standards are able to provide professional users with a series of unique tools for the safety and security of personnel, as well as those for general communication, guaranteeing high quality voice communication and advanced functions of great added value.

Mass communication to groups, availability, the tracking of mobile assets, are all crucial factors in the **optimization of the production processes** and **risk prevention**. The adoption of a **private network** allows you to have at your disposal a direct channel with all your staff and your resources both inside and outside the structure.

>>> Looking for a person or communicating with one or more groups of people becomes **easy and immediate**.

>>> The simplicity and immediacy of communication allows you to find and **share information quickly and at extremely low costs**.

>>> The interaction with automated systems or the interconnection between productive activities **increase profitability**.

The radio systems proposed by Mobilcom allow the workforce to share a **large volume of communications and strategic information**.

*Ideal for industrial plants, hotel and tourist facilities, hospitals, warehouses, factories and other production sites that occupy one or more areas.*
